

## LINQ Homework

Consider the following schema

Create a console application and generate classes against these tables using LINQ to SQL.

- 1- Write code for following tasks. Take input from console wherever needed.
  - a. Insert New Customer
  - b. Insert Order and Order Details for particular customer.
  - c. Get all Customers where customer Name starts with user input value.
  - d. Get all orders and its details from order detail table for customer(s) where customer Name contains user specified value.
  - e. Get all orders and its details where order date is in between user specified range.
  - f. Update customer(s) where name matches user input element.
  - g. Delete all order(s) for particular customer where customer name equals to user input value.

For c, d and e, use Query + Method Syntax.
